

PLANETARE BEWEGUNG FÜR MUTTER ERDE
 PLANETARY MOVEMENT FOR MOTHER EARTH
 MOVIMIENTO PLANETARIO PARA LA PACHAMAMA

8th Information Letter

November 2013

Preliminary comments:

- We have a new website since November 11th! It is clearer, more easily readable, and more structured...
- The 2nd revised and updated German edition of Rosalie Bertell's book: "Planet Earth, the Latest Weapon of War" has been ready since summer, the edition now features photographs!!

Contents

Breaking news: The Fukushima disaster is yet to happen! p. 1

General article: One of the last interviews with Rosalie Bertell on **radioactivity**, p. 2. Further articles, see p. 9

Dates: incl. A PETITION to the European Parliament and Schröter's discovery on how to reduce radioactivity, p. 9

Our Organization : A Large Donation! p.12

Information from Around the World, p. 12:

- **Fukushima in general/** the Stuxnet- Virus: danger for nuclear plants/ the Arctic and the Gulf Stream/ Geoengineering/ Spraying (chemtrails)/ Weather Wars in combination with „natural“ disasters?/ The climate conference in Warsaw/ Unlimited power to corporations? TTIP-TTP

Movies/publications, p. 19

Breaking News: Fukushima

The CLIMAX of the disaster IS YET TO HAPPEN...

... and it is actually inevitable. For, the mission is a practically impossible one, however, it is without an alternative and only just beginning, has never been

employed anywhere else, and can only be accomplished from a distance with robots and cranes; this mission is the recovery and storage of **1 ½ thousand** fuel rods that cannot possibly have remained intact. The objective is to recover them individually, completely, and without the rods touching each other; all of this from a holding basin that is damaged as well and is situated in the upper stories **30 m above ground** in the partially destroyed **Reactor 4**, which is ready to collapse at any moment: if this recovery, however, does not take place then the collapse of the building, which has been estimated with a probability of 95% within the next 3 years, will cause an explosion setting free the force of an equivalent of **14.000 Hiroshima bombs**. The consequences will be the immediate evacuation of entire Japan and its neighboring countries, including the United States west coast and the endangerment of all life through radioactive contamination throughout the entire planet earth. The duration of this impossible mission that was supposed to begin on November 18th is planned to take 1 year. - The workings of the system now have become transparent in its entirety:

1. The apocalyptic disaster is almost inevitable (the last earthquake was recorded on October 25th in the Pacific Ocean near Fukushima, magnitude 7,2)
2. Avoidance, hope, and postponement are not options any more. There are no more excuses that can be made in order to avoid facing what needs to be done now; **even if this cannot help to fend off the disaster.**
3. The exclusive cause for this disaster is man-made.
4. It lays bare all the character traits of the patriarchal relationship to nature, which lie in the negation and simultaneous exploitation, destruction, "alchemical" transformation and **misconception about the success of the utopian project of an impossible substitute for life on earth by man-made artificial products.**
5. The actual creation of the disaster of 2011 does not change facts, even if it was a natural disaster, but constitutes a time lapse of what would have happened at some point in time anyway and, therefore, is definitely about to happen globally. For, no building can withstand thousands, hundreds of thousands or millions of years...

(cf. 5.th Information Letter)

General Article

Are we the last generations? Radioactivity as the gradual extinction of life.

One of her last interviews in 2010, which was circulated informally; it was given a year before the events in Fukushima in conjunction to her prior topic about the effects of radiation, and in particular of low radiation, on the organism. She got the Right Livelihood Award 1986 for “No immediate Danger? The Future of a Radioactive Earth”, London 1985 (German version “Keine unmittelbare Gefahr? Die radioaktive Verseuchung der Erde”, foreword by Petra Kelly, Goldmann 1987). Rosalie Bertell died in 2012 in the United States. Translation and title by PMME.

***Interviewer:** I think you did a lot of research about the radiation, even when it is a low radiation where usually it is said: “Don’t worry, no problem at all”. What have you found out about the effects of low radiation in the long run?*

Bertell: Well, my background is as a researcher. And I started by studying the effects of medical diagnostics x-ray, dental x-ray and chest x-ray. We had a huge population that was followed over three years. So we had about 64 million person years in the study, it is very big. If you have a big population like that and you have measurable x-ray exposures, you can see what happens in the population. I am coming from looking at medical x-rays, and then seeing environmental pollution as bigger. With many other researchers studied the atomic bomb and they go down to these low levels and I said: Oh it’s not anything! So a lot depends on your perspective. So when you look at a large population and you start saying and you ask what happens when they were exposed to radiation, I think generally the question has been wrong. People ask: How many cancers does it cost. I don’t think that is the answer. Because if you look at live in general, the most obvious thing is we grow old. And we grow old in a kind of systematic way and even the cancers are old age diseases. So what I did was to change the question. And I said: How much medical x-ray would you need to be exposed to so that you get the equivalent of one year of natural aging. That is a very different research question. In order to measure natural aging I use the non-lymphatic leukaemia. They go up in a large population like compound interest, ranging from about age 15 every year there is a 3% to 4 % increase in the rate of the non-lymphatic leukaemia. It is just when you have money in the bank that interest is not very big when you are 16 or 20 years old, but by the time you get to 60 that is a large amount of money, it is also a large rate of this cancer. That is why they come at the end.

So I used that as my measuring stick and asked: how much medical x-ray would be the equivalent? I actually measured the aging effect of having dental x-rays or chest x-ray. What was surprising to me: It’s the same amount as you would get background in a year. So it didn’t make any difference if you got that radiation exposure very fast, because you got a chest x-ray or whether you had it slowly over a year. You still in terms of vulnerability you were aged. What that means then practically: If you are in your 20s or 30s and you have an accident and need extensive x-rays probably you won’t feel much in terms of the difference. However if

you are vulnerable like 60, 70 years old, the annual level of what you experience, you will experience more vulnerability from the x-rays because it is a percentage and a higher rate if incidents. So you are more vulnerable as you get older.

And so I started looking at young people who got leukaemia and I mean the cases under 45 years of age. And I found within certain groups they are something like six times as likely to get leukaemia in that younger age group. And if you have young people with things like diabetes arthritis, often we associate them with old age. There it is 12 times as likely to be in a young group to have leukaemia. So there are some signals to us that a person is prematurely aged and those people are more vulnerable to radiation exposure. It's like they have already moved further on the list. And it's not exactly medical x-ray, because for example with people who have heart-disease, some are treated more aggressively with respect to x-ray. Some people with heart-disease are x-rayed every year. Other have an x-ray may be five or six years and it was the once who had the x-rays more frequently that came up with the leukaemia. So I started moving people at the age line according to their own personal record of medical diagnostic x-ray. And it explains very many biological phenomena. There seems to be a whole lot of aging processes connected with this.

One of the most remarkable things is very often in radiation studies that men and women radiation measurements are different. I put them on the exposure age which was your ordinary age plus your medical exposure. When I did them with exposure age many women were the same and I found that it had much to do with the cultural difference in the use of x-rays. Many young men had x-rays because of sports. They had all these sport injuries. Women don't start to get x-rays until they are pregnant. And then it is mostly dental. And then you get to the midlife-crisis. So where is a difference in the way we treat men and women and boys and girls with x-rays.

***Interviewer:** Could this relate also to this kind of radioactive radiation which we have through atomic testing or Chernobyl?*

Bertell: When we get into the nuclear industry whether it is uranium mining or milling or the reactors or use of weapons or even the radioactive waste, you are into particular radiation which we can either breathe in or take in in water and food. It can stay in the body and differentially expose some organs and not other organs. So, you get these small amounts of radiation operating in the body, and you get what I would call „differential aging“. So many of the problems we see come from how long this material stays in the body and where it goes.

***Interviewer:** So would you say these general reactions of the governments if there is any accident that there is no danger for the citizens, that this is basically wrong?*

Bertell: It is basically wrong. It is basically wrong because these particles release energy. The DNA that carries all your genetic material, or the RNA which are the messenger molecules which run our body, which make our body work. So we have to ask: how much energy will it take to break them? It only takes 6 to 10 electron-volts of energy to break these big molecules. If you take something like uranium, which is not considered very radioactive, just one atom and one event releasing an alpha-particle is over 4 million electron-volts. You cannot release that in tissue that is living and not do damage. So when you talk probabilities, you are moving from the fact that you break DNA, you break RNA, you can destroy the membrane of a cell, you can break things like the mitochondria that can do the energy of the cell.

You can say, we do not care about all the damage, we only care if this damage leads to a fatal cancer. So that is the only one will count. You can start making the probability smaller if you make the end point more particular and say: I don't care if I get diabetes, I don't care if my immune system is down, I don't care for all these other things.

Interviewer: *Iraq DU (Depleted Uranium)*

Can you say something about DU in weapons as they were used during the Iraq war?

Bertell: Depleted uranium is the waste from the uranium enrichment process, which is a process needed both for a nuclear reactor and for nuclear weapons. In term for the United States the greatest amount of waste is depleted uranium. If it is radioactive, it requires a licence to be able to even handle it. And when they do the tests of these weapons in the United States they do it in a superbox, which is totally sealed, in the same way they would experiment with biological warfare, chemical warfare agents. So it is a level for high protection for even to test it.

It is chemical warfare, because uranium is a heavy metal, a very toxic heavy metal, and it is also radiological warfare, because these things are radioactive. Something special happens to it in the field. It is not just like radioactive dust in a mine or a mill. Because if you put it in a bullet or a missile and it hits the target this friction is enough to set it on fire and it goes to very high temperature. What happens is it forms an aerosol, which is ceramic or glass. It is like pottery and putting it in an oven it becomes ceramic. So what you have are very small particles of glass which are radioactive, which can be breathed, which are light, so they can move a great distance from the point of impact. It is easily measured 40 kilometers from impact.

Because of being glass they are highly insoluble in water and that is very important, because it means they stay in the body longer. To understand that: If you sit in the sun for 15 minutes is not same as if you sit there for 12 hours. So if you take very soluble uranium it can pass through the body in 12 hours and be gone. Some of the more insoluble may take to years. But this stuff looks like it is taking 10 years or more. So right now the veterans from the gulf war – they were exposed in 1991, this is 1999 (in the research) and they are still excreting between 4 and 5 microgram of this depleted uranium every day in urine. That is totally unacceptable. It is no wonder they have medical problems. It does damage to the blood, the bone, the liver, the spleen, the lymph-knots, the kidney. You got this material which is radioactive inside the body for nine years, ten years. That is why you are dealing with such a massive and such a mysterious kind of medical syndrome.

According to the Pentagon 400.000 of the American veterans where exposed with depleted uranium: on the map is the whole southern part of Iraq. So you had 400.000 exposed. They say 200.000 have sought medical care through the veterans-administrations since they are home. Of that a 115.000 have been diagnosed with gulf war syndrome, which means these man are unable to work. Many have died. I have had various estimates that the number of those that have died reaches upwards 8000 to 10.000. The others can't work. They have chronic fatigue, vomiting, blinding, headache, inability to sleep, respiratory problems, various kinds of pain, cramps – just general disability. They also had an abnormal number of deformed children. And this depleted uranium has been found in seminal fluid. So it is a very serious problem. If I have to say how much of the gulf syndrome would be due to depleted uranium, I would guess about 50% of the damage. (.....)

What they like about the uranium is it is free. They get it free because it is radioactive waste. And it saves the company money because they would have to properly keep it away from the biosphere. They like it because it is free. (...) 600) It is very much like landmines, because it will continue to kill long after the war is over. It differentially will kill the women and the children, because women have high risk tissue, breast and uterine tissue which are more radiation sensitive. Children are growing so they incorporate more in bones and will have the long term cancer effects. It is also a violation of the international law because it has very broad pollution effect that will go across national boundaries. It also makes the „precision-bombing“ ludicrous (ridiculous?). It is not precision bombing. And I think it also undermines NATO's claim of this being a humanitarian war, because what they are doing in terms of poisoning the land and the people and the water and the food is certainly not humanitarian. So it is a complete contradiction to everything they claim to be standing for.

I understand from international lawyers that we do not even need a new convention for it, it is already condemned under international law. The opinion of the human rights tribunal in Geneva (it is in Strasbourg) is that it is a weapon of „mass and indiscriminate destruction and therefore it is unlawful“. The United Nations has appointed a reporter for this issue and they are going to present their brief in August this summer. The World Health Organisation is trying to set up an Investigative Committee to look at Iraq's claim, because they now have six times the rate of childhood cancer and some of the Iraqi Veterans, that were exposed now have between five and six times the lymphoma and leukaemia rate of veterans that were not exposed. So the World Health Organisation has asked for funding and volunteers and wants to do a three year study in Iraq. All of that supportive information is not in, but it is already clear that it violates the international laws and it certainly violates the public relations material coming out on this war.

Interviewer: ...Severe consequence for future generations?

Bertell: It will have consequences. I have done a lot of work on the Marshall Islands where they got the fallout from the weapon testing. And the Rongalap people are people that are dying out, that whole clan.

Interviewer: ...Marshall Islands- example

Bertell: It increases infertility and inability to have children. They went for about five years without even being able to get pregnant. Then they started having spontaneous abortions, what they call jelly-fish-babies. It is a pregnancy of something like a tumour, a child is not formed. It is a molar pregnancy. Then they started having deformed birth. But the birth rate is dramatically down at this whole clan of people and their next generation is physically less fit. Their birth rate is down, they die younger, in the 30s and 40s. So it is obvious that this whole line of people is dying, it is not going to survive. What I think we are doing is that our generation is making a decision on how many future generations there will be. How much is shortened depends on how careless we are. So we already shortened future generations because whenever you introduce genetic defect then this line will eventually die out. But some will go two generations, some will go seven generations.

When you are talking about constant low radiation exposure, what you are doing is introducing mistakes into the gene-pool. And those mistakes will eventually turn up by killing that line, that cell line, that species line. The amount of damage determines whether this happens in two generations or in seven generations or 10 generations. So what we are doing

by introducing more mistakes into the DNA or the Gene pool is we are shortening the number of generations that will be viable on the planet.

We have shortened the number of generations that will follow us. We have shortened that already. So we reduced the viability of living systems on this planet, whether it can recover or not. We don't have any outside source to get new DNA. We have the DNA we have, whoever will live on this planet in the future is present right now in the DNA. So if we damage it we don't have another place to get it.

There will be no living thing on earth in the future that is not present now in a seed, in a sperm and the ovum of all living plants and animals. So it is all here now. It is not going to come from Mars or somewhere. Living things come from living things. So we carry this very precious seed for the future. And when you damage it you do two things. You produce a less viable harmonized organism with the environment; at the same time we are leaving the toxic and radioactive waste around. So you are going to have a more hazardous environment and a less capable organism. That is a death syndrome for the species, not only for the individual. It is going to be harder to live. And the body will be less able to take stress and you are increasing the stress at the same time.

We are responsible for what we turn over to the next generation. It is amazing to me because I am the daughter of people that came from Europe, migrated to Canada and the United States for a better life for their children. And it seems that our generation does not care for the future. It is not our heritage. Our heritage was to give something better to our children, than we received. And we seem not to care. I find these very strange and I think most of our grandparents would turn over in their graves, if they would know what we are doing.

Yes we certainly have to chance our heads and there are very good ways to carry this message. I think we even need a legal protection. We are thinking in terms of a „Seven Generations Law“, which means that everything that is passed through legislation, you have to answer the question what is the impact of this to our great grandchildren's great grandchildren. You have to be asked an answer this question before you take any major planning or major changes or major laws. It is the North American indigenous peoples' rule that it has to (be) safe for grandchildren's grandchildren. Otherwise it is not acceptable.

There is no real protection from it but you can reduce the effects by some things. Certainly stay in the house with windows closed during these bombing episodes and as long afterwards as possible. But your main concern will be getting it through the food chain. They are same key-leading agents. They take inorganic material out of living tissues. One very simple key-leading agent and a mild one is distilled water. You can use distilled water to cook your vegetables. If there were any uranium in the vegetables it will go out with the liquid. You can also drink the distilled water instead of either bottled or filtered or regular water. Distilled water will do the same thing in the body. It will tend to take out the unwanted inorganic chemicals. Another thing that available generally is „spirulina“, which is blue - green algae you can usually get in a health-food-store. That is also mild key-leading agent and will help to rid the body of some of these toxins, included the depleted uranium.

Or try to get rid of it through sweat respiration: Saunas. If you get it out through the skin you save the kidneys. The idea is to get it out of the tissue and out of the blood and then out of the body instead of going back into storage.

We need to learn to get along with each other, because we live on a small planet. If we fight over it nobody is going to have it. Another thing is: We are straining the natural ability of the earth to generate itself. The earth can usually take it back within a year. But when we measure what we now take out (as) resources (Fish, Food, Iron, Coal, Oil), all these resources which we take for our lifestyle. We are now taking out about 1.33 times what the earth can replenish in a year. So we are running an ecological deficit. In 1992 we were at 1.25, so is going up. People worry about financial deficit, but that is nothing compared to an ecological deficit. It means constantly reducing the carrying power of the globe. At the same time we are increasing in the number of people. If we don't do something this will be a global dimension crisis. That's the reason to say: the most important thing to do is to eliminate the military globally. The military is one of the most rapid consumer of resources. If you got rid the military globally you would immediately get rid of the ecological deficit, that we are running up every year. This is buying us time to set up a better way to live on this planet. Yes, we need globalisation in the heads. We don't need Mono-culture, but we need to learn how to live together on this earth, how to use conflict resolution in place of military, yes we need a police-force, yes we need laws and courts and that sort of thing. But we don't need military. Military is an abnormality. It is destroying our culture, it is destroying our environment, it is destroying everything we want. And it is time to get rid of it.

Interviewer: 7 Generations?

Bertell: I would maximize the health of this beautiful living planet as much as I could and I would say: I give you this with love. Keep it and give it to as many generations as you can. Life can be good. And live is really a beautiful gift. Not of us has asked for it. None of us deserves it. It shouldn't be something that is a disaster for everybody. It should be something enjoyable and that means that we have to do it differently from the way we are doing it now. For most people live is a terrible thing. People are committing suicide, because it is so ugly for them. That is not life. That is not the way it should be. No other species is going around committing suicide like humans. So there is something very radically wrong with the way we are behaving.

Dates

8th/9th April: European Parliament, Brussels: „Skyguards“ meeting, organized by (former) members of the European Parliament for 48 European activists “Geoengineering vs. Civil Society”, and US Film maker Mike Murphy (Why in the World are they Spraying?), see the report on www.pbme-online.org as well as in the 2nd German edition of Bertell: Planet Earth, the Latest Weapon of War, cf. the interview with the organizer of the meeting, Josefina Fraile, in Spanish: <http://www.youtube.com/watch?v=cpkoshy8hTQ>

PETITION TO THE EUROPEAN PARLIAMENT COMMITTEE ON PETITIONS

I, the undersigned, (name and last name),
(Profession)I.D.....
National of....., resident of.....
with address in

As a sovereign individual of

And, or / in representation of the Association

I adhere to the Petition made to the European Parliament by **Terra SOS-tenible, Skyguards and Alternativa**, in the terms exposed in their document presented to the European Parliament on 13th May 2013, for,

The violation of fundamental rights of European citizens as set out in the Treaties, such as the right to health, the right to security, and the right to integrity, as well as the right to be informed. This petition also concerns environmental matters and consumer protection.

The basis for this petition has been outlined in paragraphs one through seven of the Grounds section, and in points one through five of the Legal grounds.

Therefore,

I demand that this petition (and the annexed documents), be admitted and, given the seriousness of the facts reported, that the Committee on Petitions grant the demands submitted by Skyguards in the Conference summary. And HAVING REGARD that weather modification programs / geoengineering are an accomplished fact in Europe, I join the **appeal to the European Parliament** for a thorough investigation to be made at all levels, including analysis of soil, water, air, flora, fauna, persons and animals, by independent experts, for the purpose of compiling evidence for legal action against those responsible for these actions against public health and security, and those aiding and abetting them.

For the purpose of making this petition effective, I sign it, in theof 2013.

SKYGUARDS – Plaza de la Paz, 16 – 34886 Velilla del Río Carrión (Palencia)
Spain

- September 7th: Heidenheim, Germany, **Congress “Ereignishorizont - Wissenschaft trifft Spiritualität. Die Synthese“** (Ereignishorizont - Science meets Spirituality. The Synthesis) with **900 visitors**
Presentation „**Geoengineering and the Planetary Movement for Mother Earth**“, participation in the panel discussion, Information desk of PMME with the MatriaVal women Krista Köpp-Blodau and Kerstin Pilop. **DVD** available from Peter Herrmann: www.Seminare-mit-Seele.de

The congress was one for alleged **alternatives**, however, was visited by dyed in the wool **patriarchal men** and **gurus** from the esoteric corner, “free energy”-, mystics, spiritual teachers-, quantum theorists-, and the pre-antiquity-research scene. The topic was apparently about the impending ascent of human kind and the earth, as well as “consciousness” into higher spheres - finally about something like a new global religion - so to say the **religion of the NWO**, the new world order? That, however, wouldn’t be viewed in the same ways there....Except for me as the only woman, just invited shortly before the start of the conference and given only 15 minutes of speaking time, nobody actually spoke of the real and pending problems, of their genesis or possible - completely inverse - consequences.

*So, the view of the heavens through **rose colored glasses** was contradicted through the view of the skies through the **hazy lenses** obscured by chemical sprayings.*

- October 10th, Innsbruck, Austria: Demonstration against Monsanto. Short presentation by Claudia v. Werlhof about the reason why **Monsanto** has developed **aluminum resistant seeds** and can easily, though temporarily, retreat from the European market, as just announced: for, when aluminum is sprayed as is the case of the “chemtrails”, nothing else will grow any more in the future.
- October 26th/27th: Visit in Völs by **Gabriele Schröter**, the developer of a device to **reduce radioactivity**, which was already tested in the nuclear research facility in Jülich, Germany:

Goodbye radioactivity? Gabriele Schröter’s visit in Völs, October 26th to 27th 2013

Gabriele Schröter arrived from Zurich on the evening of the 26th and held a presentation for twelve of us about the development of a device she has created in the form of an icosahedron (20 isosceles triangles spherically shaped) named “**Sputnik**”. A space of 1m³ is designed to contain radioactively contaminated material. The device can be opened in the middle section; it is air tight and weighs over 150 kg. The outer shell is a construction of iron; we were not informed about the material from which the inner shell is made. Until now the device has been tested with materials of low radiation, particularly using fertilizers (those that are utilized in agriculture!), materials with high radiation is not accessible and cannot be handled and has therefore not been tested. However, she believes that the device will be even more effective with these kinds of materials. She states that she had the idea after having observed the work on a project to **transform radioactivity** in support of power production. She had gathered experience with “free energy” prior to this project; her

background is in the healing professions (pediatric nurse), as well as in other trainings she has received (such as Global Scaling with H. Müller), and her spiritual experiences have led to a knowledge about “life as a rhythm”.

- According to her theory, radioactivity **is light of high frequency**, which is released through the destruction of atoms. It is excited to a state of high frequency due to the violence of the nuclear destruction. This high frequency is a destructive power for the earth (it normally exists only in outer space). Decay time for these isotopes is said to be thousands to millions of years, depending on the original material. In the device, which is built according to the principles of so called “**sacred geometry**” or respectively as a platonic solid (compare: pyramids, tetrahedron etc.), the high frequency light waves bounce off the reflecting surface of the inner wall of the icosahedron (the angle at which the light wave hits the surface is equal to the angle of the reflection). The waves eventually cancel each other out due to **interference. Resonance effects** lead to the **collapse of radiation**. Since the waves are unable to escape, this enables them to sink to decreased energy levels within a much shorter period of time. The question concerning processes, through which **decay time is determined and accelerated**, arises. Apparently, the neutralization of radiation with high density or frequency occurs at a faster pace in “Sputnik” than that of waves with lower radiation.
- Apart from the material of the inner shell, the shape of the device is crucial. The space within the device is, therefore, not a uterine one – in the sense of fertile and creative, but rather, one that enables a standstill – a quieting and death bringing space. So, the process of cancelling out radiation is induced due to the **shape of the space**. Its material, on the other hand, does not allow for a passing through of the radiation. Viewing the particles and waves as organisms, one could say that they are in the process of dying, this process is then accelerated. **Decay time, so the process of dying, is reduced to weeks or months**. Basically, there are no remains of the high frequent light, the radiation; all that is left is earth-like material.
- Gabriele Schröter gave us an account of her experiences with the scientific community, which is uninterested in her findings since they do not correlate with their scientific paradigms. Therefore, she decided to have Sputnik tested at the **nuclear research center Jülich** resulting in the measurement of a **30% reduction of radioactivity** within a certain time period. Despite these results, Jülich did not approve the device. They said it would not work. There were also no results from the Paul-Scherer-Institute in Switzerland. A test with the objective of determining whether the device leaks radioactivity was cancelled. **There is no interest in the device, since nobody is able to explain its functioning**. It is believed to be impossible that something can dissolve and not leave a trace, all without going through a process of “transmutation” (the thinking of alchemy!!). Such a thing could not exist.
- She will now have a second device built, which will eliminate some of the inaccuracies of the first one. The cost for one device is 25.000 €.

- We then had a long conversation. The conversation also included the risks of CERN, situated below Geneva, which bears the potential of damaging the earth (risk of the creation of black holes, Prof. Rössler, Tübingen, cf. also Deutscher Bundestag - Wissenschaftliche Dienste: „Das LHC-Projekt CERN: Gefahr durch schwarze Löcher?“, WD 8-3000-063/08, 2008) and where protons are accelerated to the unimaginable speed of light at which they are then made to collide...Currently CERN is off the net until 2014. With the help of a lawyer, G. Schröter has filed a lawsuit in the constitutional High Court of Germany. She said: “After all, it is about nothing less than life. As long as we don’t know that this isn’t harmful, we cannot support it!” This is an ethical question. However, she soon found out that **CERN benefits from the status of immunity**, which means that it cannot be sued or become subject of a lawsuit. The High Court came to the conclusion:
- **“The right to scientific research is higher than the right to live!”**
- The Court said that there is no proof of realistic danger. This means that we will have to take the chance! This is obviously also true for the nuclear industry - despite the disasters!
- The goal needs to be the construction and promotion of acceptance of Sputnik in order to begin operation of this device in different sizes and wherever necessary - for example, for the thousands of fuel rods in Daichi...
- (report Claudia v. Werlhof).
- Nov. 8th Eppan, Bolzano: **Presentation by Attorney at Law D. Storr: “Geoengineering and Spraying”**, 550 visitors, and a short presentation by Claudia about R. Bertell and **“Planet Earth, the Latest Weapon of War”**.

Our Organization

- **New website**, created by Lukas Lechner and Simone Wörer
- Members: now between 720 and 730
- Board: **Martina Alfreider** has been voted to take the place of our retiring secretary Martin Haselwanter. Welcome Martina! The rest of the board remains unchanged.
- Donations
We received a very **large donation** from **Theresia Sauter-Baillet** from Germany. Thank you Theresia!
We are now off the hook for some time!

Information from around the World:

- Fukushima in general
- 1. Fukushima nuclear accident according to David Icke

<http://www.youtube.com/watch?v=an7EEed2ra0s> (cf. our Information Letters since 2011)

- 2. The business with nuclear waste and the silence about contamination (also regarding Tokyo): Taz: <http://www.taz.de/!82695/> "**Die Geldmaschine**. Besuch beim Physiker Sebastian Pflugbeil". („The money machine. A visit to physicist Sebastian Pflugbeil“)
- 3. **Earthquake** 7.2 off the coast of Fukushima, October 26th. The grounds of the nuclear plant had to be evacuated temporarily.
- 4. Spiritual experiment: **Fukushima Remote Cleansing**
Patronaged by Little Grandmother (Kiesha Crowther) implemented globally. Results?

„Dear Friends all over beloved Mother Earth!

The situation in Fukushima **right now** is extremely critical and is a danger for the entire planet. Please get informed in case you do not know already.

German researcher Gabriele **Schröter** found a way to erase radioactivity

effectively (cf. dates). The device called ‚Sputnik‘, is based on *Sacred Geometry* and you have to put the radioactive material inside in order to erase radioactivity.

Scientific tests have proven that ‚Sputnik‘ works very well. In a conversation on Friday (10/18) I suggested to use her technology for remote cleansing of the Fukushima situation and Gabriele joyfully agreed. In other words, we will combine sacred geometry technology with the powerful spiritual approaches of meditation, prayer and ceremony. Let us all connect on Thursday (10/31) at 5pm CET and unite in the following procedure:

- a. Be deeply grateful for all the gifts you have been granted – including the chance to utilize your spiritual power for helping Mother Earth and all of her living beings
- b. Visualize ‚Sputnik‘ (see picture or simply visualize an *icosahedron*)
- c. Place all Fukushima radioactive material inside ‚Sputnik‘
- d. Ask for the grace of erasure of all radioactivity – rest here for as long as you feel like and in addition use any healing techniques if you wish to do so (Mantras, prayers, meditations...)
- e. Be deeply grateful for the grace you have received

Then stay tuned in and repeat this particular procedure as often and for as long as you feel like. We are extremely powerful spiritual beings – and in connecting and combining our lights we will fan a flame so magnificent that we will be amazed on the peaceful power it will represent in the world!“

- 5. Contaminated fish: <http://www.straight.com/life/497646/fish-data-belie-japans-claims-fukushima>
- 6. **Olympics in hell?** Japan has won the bid for the Olympics in 2020. The residential areas of Tokyo, however, are already heavily contaminated; so much so that they would actually need to be evacuated (cf. 2. “The money machine”)
- 7. **A fatal cycle: The nuclear contamination of the Pacific Ocean through Fukushima cooling water.** A fatal water cycle already exists between the radioactive cooling water of the wrecked 3 reactors and the ground water, which has been reached due to the melting down of the

reactors. Of this cooling water, 300 tons flow into the Pacific Ocean on a daily basis. Beyond that, there are meanwhile **leakages** in the **1000 barrels** of the highly contaminated water that is provisionally stored in these containers – the storage is meant for water that has been able to be retrieved. This storage on land does not constitute a **durable solution** and is not a long term possibility due to spatial constraints. It is estimated that the cooling will need to continue for another **40 years**.

- 8. For the first time, the Japanese government has admitted the existence of a **death zone** around Fukushima: The 20 km around the Fukushima plant will **never be populated** ever again, those who have fled cannot go back. Only domestic animals run wild live there now.
- 9. **The Stuxnet-Virus: A danger for nuclear plants globally**

The Stuxnet – Computer-Virus has already been deemed responsible for the Fukushima accident (cf. Information Letters since 2011). Apparently, it has now taken on a life of its own, becoming a **boomerang**. This would mean that the fears of Joseph, Weizenbaum, one of the most renowned developers of computer systems, are about to come true, namely that these technologies would one day, logically, become uncontrollable (s. “Kurs auf den Eisberg” – heading for the iceberg). Nikola Tesla, too, had warned of military use of EM – especially scalar technology, since they react instantly, unable to differentiate friend from foe.

posteingang@kosmische-tagesschau.de

Subject: [KT] STUXNET threatens nuclear reactors, 13.11.2013

America and Israel have created a “monster virus” that now threatens nuclear plants globally.

Editorial

Due to their obsession in stopping Iran from the development of nuclear weapons, the USA and Israel have developed a cyber virus named “Stuxnet”, which is capable of crippling Iranian nuclear facilities. As declared this week by one of the leading experts in computer security, Eugene Kaspersky, the virus has also attacked a Russian nuclear plant.

The Internet IT platform *The Register* wrote:

“The notorious malware *Stuxnet*, which is speculated to have been developed by the USA and Israel with the objective of disturbing Iranian nuclear facilities, has apparently also lead to disturbances in a Russian nuclear plant, reports Eugene Kaspersky”.

These revelations occurred ...after a presentation that Kasperky...had held in the Australian *National Press Club*. He explained that apparently the intelligence services responsible for the “offensive technology” are apparently unaware of the consequences that are expected when this malware is employed. “Everything you do is like a boomerang. It will get back to you”, he stated. “...unfortunately it is very well possible that uninvolved countries may become victims of cyber-

attacks launched on important infrastructure facilities...we are, after all, dealing with cyberspace. There are no boundaries and many facilities utilize the same systems."

He learned from "Russian space guys" ...that even devices aboard the ISS have temporarily been contaminated after scientists boarded the space station with contaminated USB drives. Other security experts agree with this point of view.

The British Security Website *V3* reports in an article titled: "Stuxnet: UK and US nuclear plants at risk as malware spreads outside Russia":

Security experts have warned the notorious Stuxnet malware has likely infected numerous power plants outside of Russia and Iran.

"Experts from FireEye and F-Secure told *V3* the nature of Stuxnet means it is likely that many power plants have fallen victim to the malware...F-Secure security analyst Sean Sullivan told *V3* Stuxnet's unpredictable nature means it has likely spread to other facilities outside of the plant mentioned by Kaspersky. "It didn't spread via the internet. It spread outside of its target due to a bug and so it started traveling via USB. Given the community targeted, I would not be surprised if other countries had nuclear plants with infected PCs", he said.

Director of security strategy at FireEye, Jason Steer, mirrored Sullivan's sentiment, adding the insecure nature of most critical infrastructure systems would make them an ideal breeding ground for Stuxnet... Steer added the atypical way Stuxnet spreads and behaves, means traditional defenses are ill equipped to stop, or even accurately track the malware's movements... "It's highly likely that **other plants globally are infected and will continue to be infected as it's in the wild and we will see on a weekly basis** businesses trying to figure out how to secure the risk of infected USB flash drives," he said.

The use of outdated *Windows XP* systems will bear an even greater risk in future, especially since *Microsoft* has announced the end of its support for the twelve year old system in one next year. This means that Microsoft will not provide security updates for the system anymore.

Arctic – Gulf Stream

A large **freshwater bulge** has been detected in the western **Arctic Ocean** that is held in place by ice floes and by strong winds creating a clockwise rotation. A melting of the ice or the turn of the winds could lead to a release of the waters, which have come from the melting of the Arctic by ELF-EM waves –which is not mentioned by the scientists – and from the melting of the permafrost and from Russian rivers. What is also not mentioned by the scientists is the possibility that if the waters are released, the event could lead to **the subsiding of the Gulf Stream**. This might constitute the beginning of a new **Ice Age in Europe**.

<http://www.bbc.co.uk/news/science-environment-16657122>

By **Jonathan Amos** Science correspondent, BBC News

UK scientists have detected a huge dome of fresh water that is developing in the western Arctic Ocean. The bulge is some **8,000 cubic km in size** and has risen by about 15cm since 2002.

The team thinks it may be the result of strong winds whipping up a great clockwise current in the northern polar region called the Beaufort Gyre. This would force the water together, raising sea surface height, the [group tells the journal Nature Geoscience](#).

"In the western Arctic, the Beaufort Gyre is driven by a permanent anti-cyclonic wind circulation. It drives the water, forcing it to pile up in the centre of the gyre, and this domes the sea surface," explained lead author [Dr Katharine Giles](#) from the [Centre for Polar Observation and Modelling \(CPOM\)](#) at University College London. "In our data, we see the trend being biggest in the centre of the gyre and less around the edges," she told BBC News. Dr Giles and colleagues made their discovery using radar satellites belonging to the [European Space Agency \(Esa\)](#). These spacecraft can measure sea-surface height even when there is widespread ice cover because they are adept at picking out the cracks, or leads, that frequently appear in the frozen floes. The data (1995-2010) indicates a **significant swelling of water** in the Beaufort Gyre, particularly since the early part of the 2000s. The rising trend has been running at 2cm per year.

Model prediction. A lot of research from buoys and other in-situ sampling had already indicated that water in this region of the Arctic had been freshening. This fresh water is coming in large part from the rivers running off the Eurasian (Russian) side of the Arctic basin. Winds and currents have transported this fresh water around the ocean until it has been pulled into the gyre. The volume currently held in the circulation probably represents about 10% of all the fresh water in the Arctic.

Of interest to future observations is what might happen if the anticyclonic winds, which have been whipping up the bulge, change behaviour. "What we have seen occurring is precisely what the climate models had predicted", said Dr Giles. "When you have clockwise rotation - the fresh water is stored. If the wind goes the other way - and that has happened in the past - then the fresh water can be pushed to the margins of the Arctic Ocean. "If the spin-up starts to spin down, the fresh water could be released. It could go to the rest of the Arctic Ocean or even leave the Arctic Ocean." If the fresh water were to enter the North Atlantic in large volumes, the concern would be that it might disturb the currents that have such a great influence on European weather patterns. These currents draw warm waters up from the tropics, maintaining milder temperatures in winter than would ordinarily be expected at northern European latitudes.

The creation of the Beaufort Gyre bulge is not a continuous development throughout the 15-year data-set, and only becomes a dominant feature in the latter half of the study period. This may indicate a change in the relationship between the wind and the ocean in the Arctic brought about by the recent rapid decline in sea-ice cover, the CPOM team argues in its Nature Geoscience paper. It is possible that the wind is now imparting momentum to the water in ways that were not possible when the sea-ice was thicker and more extensive. "The ice is now much freer to move around", said Dr Giles. ...

"We now have the means to measure not only the ice thickness but also to monitor how the ocean under the ice is changing," says Dr Seymour Laxon, director of CPOM and co-author of the study, "and with CryoSat-2, we can now do so over the entire Arctic Ocean". (postscript: Dr. Giles shortly died due to a biking accident).

Geo-Engineering

- 1. **Ilya Perlingieri**, fellow campaigner of Rosalie Bertell, **is dead**:
 „Beloved Environmental Activist/Scholar Dr. Ilya Perlingieri Has Died- a Victim of the Chemtrails She Tried to Stop“:
 Rebecca Campbell: *I talked with Dr. Perlingieri two weeks before her passing; she was then gravely ill. When I offered to help assemble a construction crew to help finish the humble hut being built on her land in the mountains to house her, she told me to hold off. This was even though she -- a soul of her magnitude at age 74 -- was essentially homeless in our sick society. Now I understand why she did so; she may at that time have had some unspoken intimations of her own imminent mortality. Her last words to me were that anyone of good will who sought to help the earth and her people were welcome on her land to help build a prototype community during the Earth's transition period. She said that this included the positive galactic forces, who were welcome to land there as well.*
- *Dr. Perlingieri was a targeted individual, with several attempts on her life by the globalist cabal that I personally know of, using environmental toxins directly delivered from the air. Her life was spared on all of these occasions, but it was her constant general exposure to these airborne toxins that eventually resulted in her untimely death from apparent heart-lung failure.*
- *The link below includes a link to a video of Dr. Perlingieri's opening keynote address at the **Consciousness Beyond Chemtrails Conference** in August 2012, which will give anyone interested enough to watch it a glimpse of why she was universally beloved and respected by all those who, like she did, have dedicated their lives to the preservation of personal and environmental integrity on earth.-- REC*

- 2. In **ntv** ! A report on spraying and HAARP (01.03.2012) - Reupload https://www.youtube.com/watch?v=oywYi_kTekk
- 3. **Elana Freeland**: I have just finished the chemtrails-HAARP book that Feral House is preparing to release in spring 2014 and I can honestly say, after hundreds of hours of research into "stratospheric aerosol geoengineering," that we have the **U.S. Navy to primarily thank for the oceans' silence, untimely deaths and disease**. The U.S. military and defense contractor corporations (the military-industrial complex) <http://defensesystems.com/articles/2011/06/08/2011-top-20-defense-contractors.aspx> have a vast tax-dollar budget *and black budget* at their disposal, and are busily **taking over Planet Earth in concert with G8 megacorporations**. I refuse to blame all of humanity for the state of our oceans, forests, soil, and atmosphere, but I certainly hold our leaders responsible. That we allow such

irresponsible, criminal, and blackmailed (yes, blackmailed) leaders is due to our helplessness before and **ignorance of the sophistication and secrecy of the global technology** being employed. Hopefully, *Chemtrails, HAARP and the "Full Spectrum Dominance" of Planet Earth* will provide a picture of the vast role that chemtrails-HAARP technology is playing in this criminal global takeover.

The current weather wars and „natural“ disasters, combined?

1. **Earthquake** in the Philippines on March 7th and October 16th and now **Typhoon Haiyan** and the Tsunami of 7m in height, the largest storm ever to be recorded with over 300 km/h and 500 miles in circumference. Millions of people are affected, thousands are dead. Is this the new “art of war” or nature or even the effect of a slowly changing nature, so to say, a disastrous 2nd nature? Questions to:

[socioecohistory.wordpress.com/.../microwave-pulse-gives-birth-to-typhoon Haiyan \(Yolanda\) hitting the Philippines. Weather warfare in action](http://socioecohistory.wordpress.com/.../microwave-pulse-gives-birth-to-typhoon-haiyan)

2. The **Pacific Ocean is dead:** Greg Ray: „The Ocean is Broken“.

<http://www.theherald.com.au/story/1848433/the-ocean-is-broken/>

A traveler only finds jellyfish, small animals, trash and plastic. Life in the womb of “mother earth” appears to be extinct...

- 3. The disaster in the Gulf of Mexico: **The Gulf is dead:** „BP has lied about Geo-biocide“: <http://enenews.com/bombshell-govt-agrees-with-blogs-bp-not-telling-truth-about-devastation-in-gulf-its-hard-to-stress-the-critical-importance-of-these-court-filings>

„The Warsaw Charade“: UN-world climate conference in Warsaw: Intended failure?

- Even the prolonging of the climate conference in November didn't change the premise of its failure. The only objective that was agreed upon is the collection of climate goals until 2015 - mandatory - *and the development of a **global climate treaty until 2020***. NGOs had left the conference

under protest days earlier. For, the objective is not at all a reduction of CO2, which isn't the true climate killer anyway, although everyone at the grassroots level continues to believe that! Rather, the objective is more of a deliberate "letting the attempts fail" in order to finally position geoengineering as the method of "saving the planet" legally and with the support of the public. The promise is to eradicate the effects and the symptoms of alleged climate change, in particular that of climate warming, instead of attempting to stop CO2 emissions until the day the cows come home. So the official variant.

In reality the objective is, as Rosalie Bertell and lately Josefina Fraile from „Skyguards“ have emphasized, ***to legalize secretly applied military geoengineering*** that has been promoted for decades and has been rampant upon and within the planet. According to Bertell, precisely this has been the **true root of the reactions on, above and within the earth** that are manifested through a time lag of 50 -60 years and clearly show themselves now. Without failing attempts for a solution, evident as a sideshow, such a "solution" would not even be in the realm of possibilities. Especially not when it becomes apparent that the "solution" has been **in use throughout all of this time** without having contributed to any improvement, on the contrary! Now efforts are underway to make geoengineering technology of the military presentable in retrospect by deeming it **"civilian" science** in order to obtain approval and recognition. In this context **we will soon end up calling for the weather wars, which the US Air Force has taken charge of, the plasma weapons of HAARP & Co., and the spraying of a variety of toxins** over our heads, our soil, and waters - ***instead of finally massively rising up against them!!***

If we don't obey, so we are told, then we will **"lose the unequal battle against nature"**, but, who is it really that is **creating an enemy out of nature** and will not stop?

Ultimate Power to the Corporations?

The looting and destruction of the planet soon to receive 100% "legal protection"?

In the aftermath of the failed Multilateral Agreement on Investment, MAI, of the World Trade Organization at the end of the 1990ies of the 20th century, an intensified draft contract has been placed on the table now: The Transatlantic Trade and Investment Partnership, TTIP, and Transpacific Trade Partnership, TTP. They have been kept a secret, much as the preceding MAI was negotiated. Hence, the need to once again shine the light of the public on both (s. M. Mies/C. v. Werlhof (Hsg.): Lizenz zum Plündern, Hamburg 1998/2003, Rotpunkt/EVA).

- 1. **TTIP/TAFTA - TPP:** The alleged "Free Trade Agreement", which in reality is nothing more than an "authorization act" for corporations and is

bound to create “legal tyranny” over people globally, if it were to be enacted. This would mean that any kind of resistance becomes illegal and the **destruction of the world is legally protected!** – From fracking, over geoengineering up to open warfare by means of “Planet Earth” as a weapon of war...
